

Effective Temperature Monitoring at Your Fingertips

Cold chain monitoring has traditionally been costly, difficult to install, maintain and keep compliant. Today, with the number of temperature-sensitive shipments and storage rapidly growing, so is complexity and cost. More regulations to comply with, more sensors to purchase and handle, more risks of human error and consequent temperature excursions.

You can easily overcome each of these challenges. Zebra Electronic Temperature Sensor solution offers exceptional visibility, control and contact-free managing capabilities to minimize risk and reduce costs. This is the Zebra difference.

Retrieve data quickly, on site or remotely, and maintain environmental integrity

- With Bluetooth® connectivity, read data easily on a mobile device with our EDGEVue app or via our Gateway through packaging, vehicles, equipment and storage facilities without human intervention
- With access to data in the cloud via EDGECloud, receive instant notifications of temperature excursions to make better decisions in the moment
- Get a convenient visual display of all sensors in range with Watch Mode

Customize settings to fit your needs

- Configure and re-configure the same device as needed for each cold chain shipment or storage environment
- Get effective control over settings: start time, reading intervals, temperature parameters and alert limits
- Reduce device inventory with Zebra reusable and customizable sensors

Take advantage of a simple, cost-effective, cloud-based monitoring solution

- Easily implement and manage Zebra re-usable devices
- Obtain quick visualization, receive timely alerts and easily generate reports for analysis and compliance
- Access a memory of 16,000 readings, available for up to 10 years
- Monitor extreme temperatures from -200° to +200°C (-328° to +392°F)

Get ready to tap into the future of temperature monitoring I'm waiting for your call
